Agenda

- About LLMs
- LLMs helping us code
- LLMs as a tool in our applications

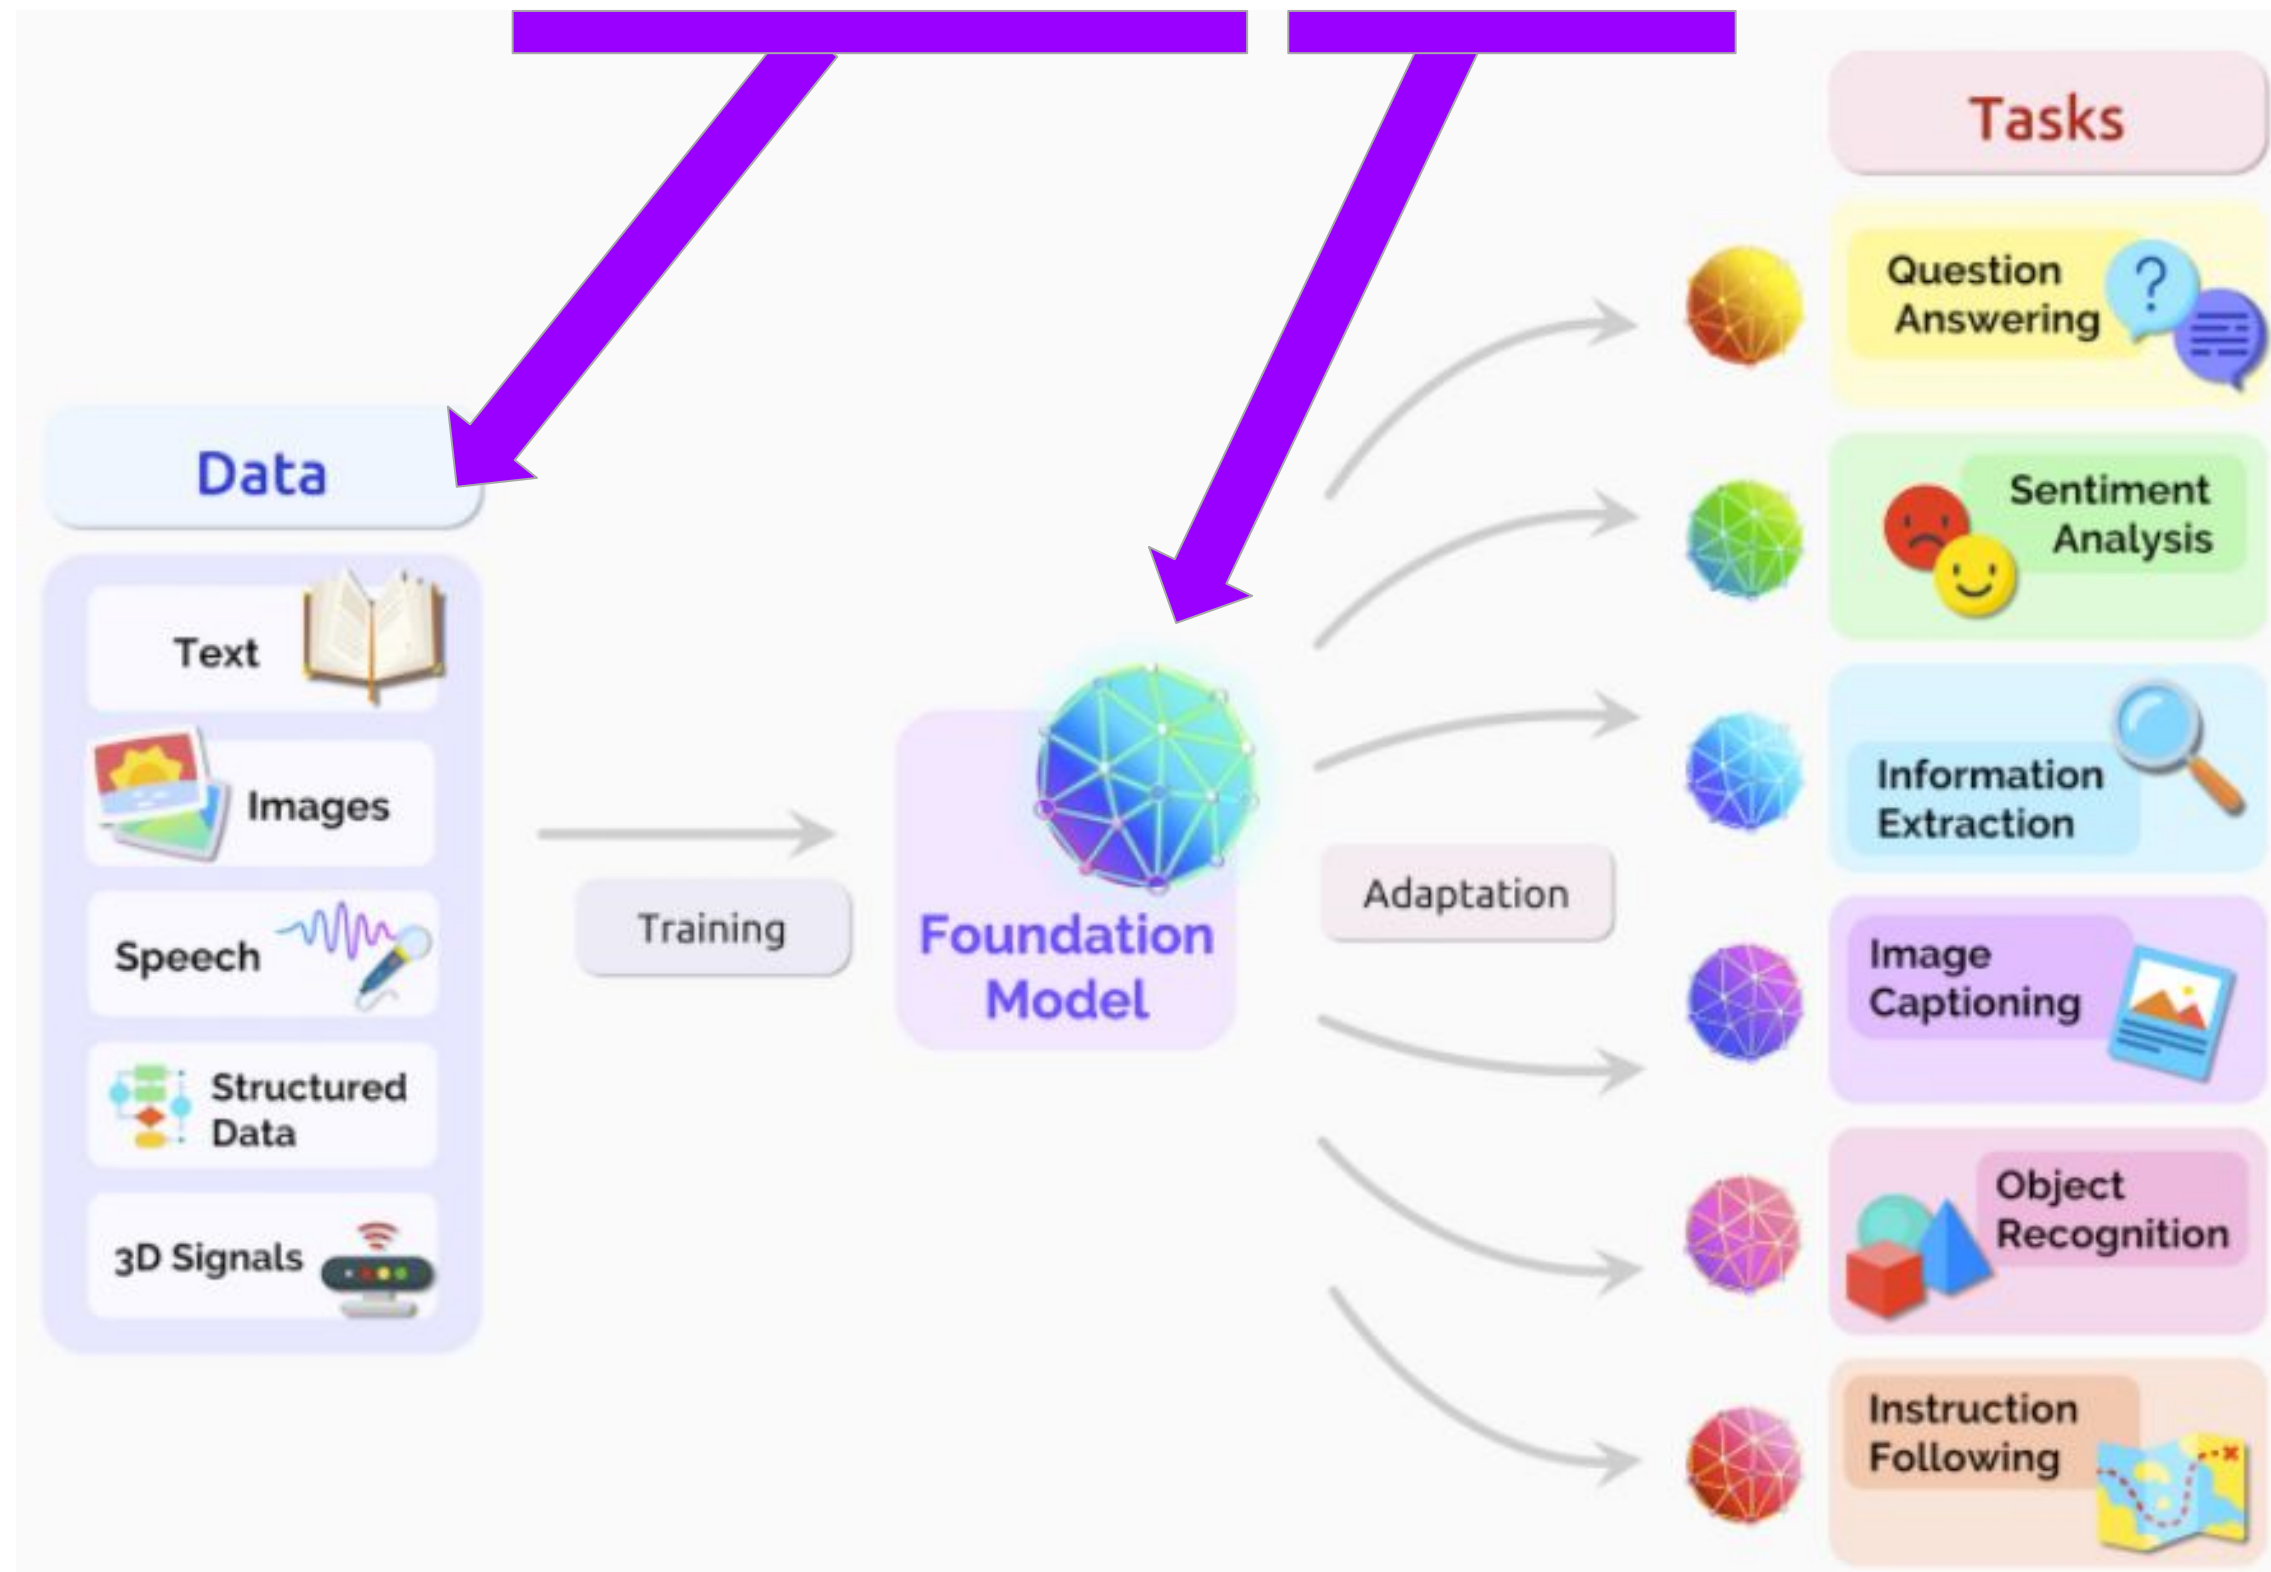

About Large Language Models (LLM)

Since ChatGPT release in Nov/22,
LLMs have receiving a lot of attention

Mostly because LLMs, like ChatGPT can help us in many tasks
And now that they arrived many things already have changed...

About Large Language Models (LLM)

About Large Language Models (LLM)

What can they do?

- Give detailed explanations on complex and clarified aspects
- Solve mathematical problems step by step
- Write code
- Write texts with different styles
- Compose musical lyrics
- Explain mathematical theorems

How can we code
with LLMs?!

LLMs helping us code

LLM Generating code

And we now have tools that speed up coding like:

GitHub
Copilot

LLMs helping us code

VS Code + ChatGPT

LLMs helping us code - options

**Amazon
CodeWhisperer**

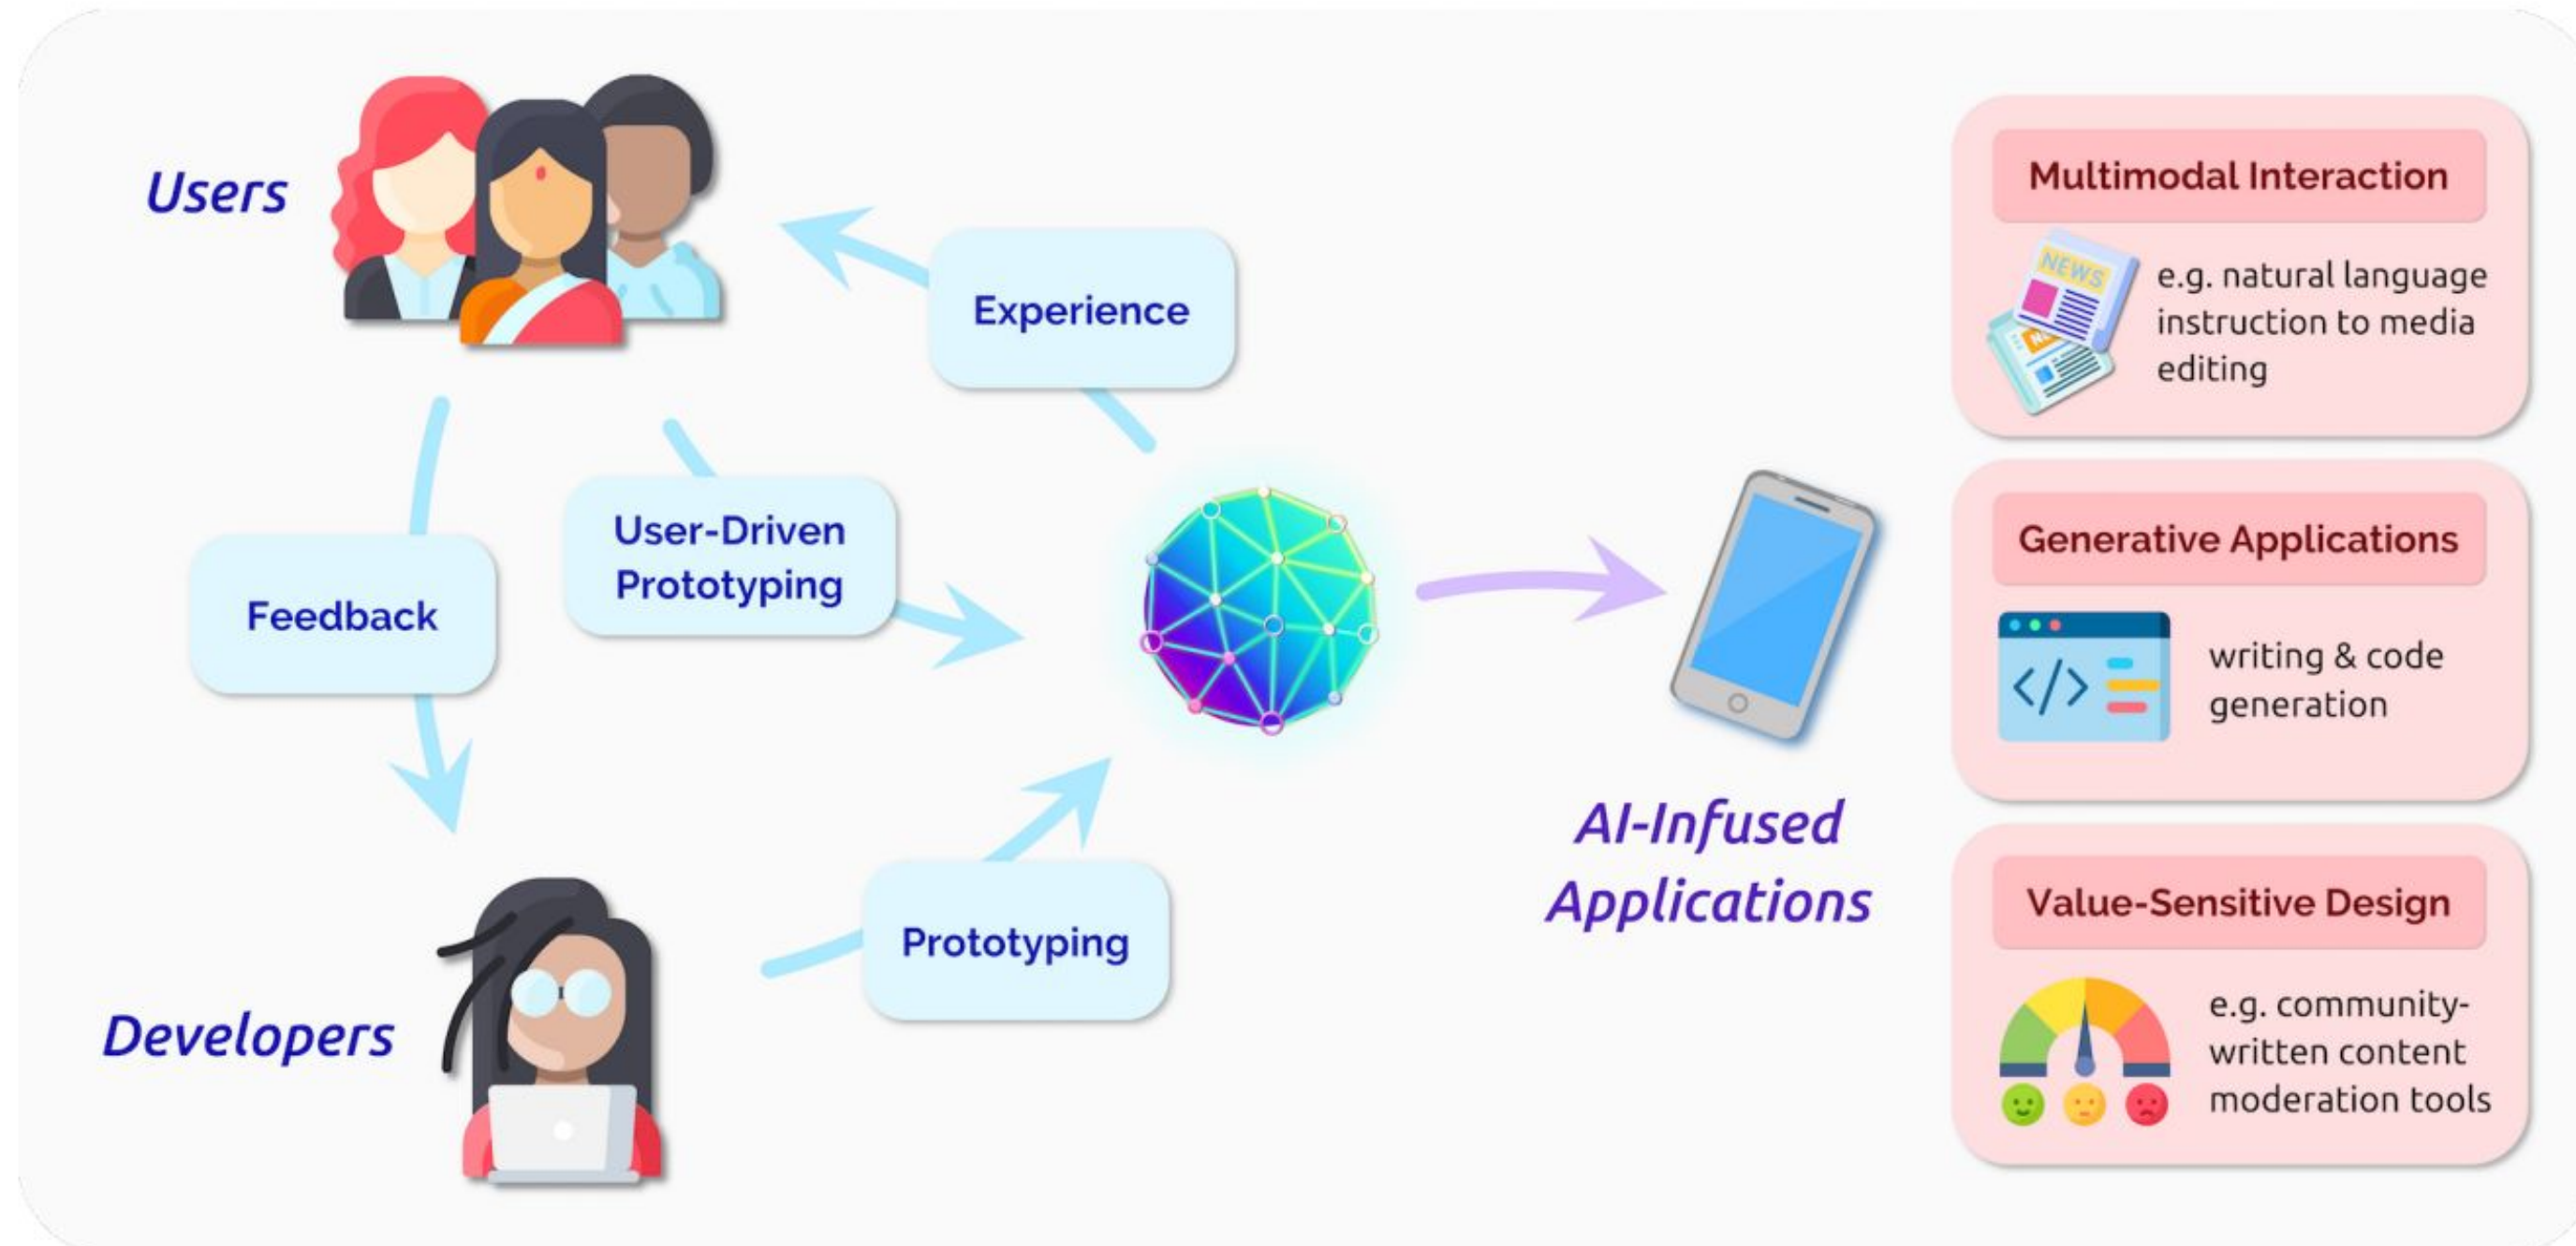

LLMs helping us code - options

Captain Stack

Houston, we got code suggestions

LLMs as a tool in our applications

LLMs as a tool in our applications

How can we develop an App in Python?

LLMs as a tool in our applications

Python for Delphi

<https://github.com/pyscripter/python4delphi/>

LLMs helping us code - Delphi

ChatGPTWizard from Ali Dehbansiahkarbon

<https://github.com/AliDehbansiahkarbon/ChatGPTWizard>

Conclusion

Three types of Artificial Intelligence

Artificial Narrow
Intelligence (ANI)

Stage-1

Machine
Learning

Specialises in
one area and
solves one problem

Artificial General
Intelligence (AGI)

Stage-2

Machine
Intelligence

Refers to a computer that
is as smart as a human
across the board

Artificial Super
Intelligence (ASI)

Stage-3

Machine
Consciousness

An intellect that is much
smarter than the best human
brains in practically every field

Conclusion

Knowledge workers are becoming dependent on ChatGPT

A poll from Momentum Works community on what they use ChatGPT for

Many people around us (and even us included) have been **using ChatGPT regularly - for a variety of tasks**. See the results of our poll on the left.

However, the fascinating thing here is - **we do not yet know the full extent of tasks ChatGPT can perform well on**. More capabilities will certainly emerge.

OpenAI has put forward a disclaimer / warning: "ChatGPT sometimes writes **plausible-sounding but incorrect or nonsensical answers**."

However, **humans often do the same, and they do not put such a disclaimer**. Savvy knowledge workers and managers have already learnt how to navigate through this, and fact check, through their dealings with fellow human intelligence.

Not to mention that **Generative AI learns and improves faster** than many of us.

Conclusion

LLMs will *not entirely replace us by now*,
and maybe never in the future!

So let's use them as **a good tool that they are!**
